Studies recognized the utilization of Arabinoglactan by micro flora, as well as it's short-chain fatty acid (SCFA) profile and it's role in immune cell proliferation. From 1998 onwards, various human clinical studies have been conducted which support the safety and tolerance of Arabinoglactan — all with no side effects. Studies have also confirmed the effectiveness of Arabinoglactan in stimulating the human immune system to guard against infection causing pathogens

pays more are rooted in philosophical and practical differences in the way its health system provides benefits, in the drug industry's political clout and in many Americans' deep aversion to the notion of rationing. The state-run health systems in Norway and many other developed countries drive hard bargains with drug companies: setting price caps, demanding proof of new drugs' value in comparison to existing ones and sometimes refusing to cover medicines they doubt are worth the cost. The government systems also are the only large drug buyers in most of these countries, giving them substantial negotiating power

For a long time I have been mentioning that the time will come when companies won't find anyone here in the USA with a technical background ... and then what? Are they going to bring all of the India population here to the USA and start from zero? Imagine recent grads with no experience at all and universities not being able to teach all the applications available in industry (universities lag about 20 years behind industry); so, that translate to students not going for any technical curriculum
